

iPatientCare or MCS - Medical Communication Systems, Inc. is a leader in medical informatics and healthcare transformation. Since 1997, iPatientCare has been helping physicians by relaying patient information to mobile physicians anywhere, anytime. It has been a pioneer in healthcare solutions on Palm Pilot and Pocket PC when there were no serious applications available for physicians. It was again iPatientCare or MCS - Medical Communication Systems, Inc. which evolved an end-to-end solution for the US Army that captured patient encounter data at the point-of-care, that is, at the battle field and relayed to enterprise IT applications. When it came to Electronic Health Record solutions for Ambulatory care and Inpatient care, it is iPatientCare or MCS - Medical Communication Systems, Inc. which has been leading the revolution since 2004.

Both eChrysalis and iPatientCare are committed to excellence. Together, we continue to improve, enhance, defy

ENTERPRISE Health Records & Operations Management

The Power of Enterprise Integration

iPatientCare is a comprehensive suite of information systems framework, that reflects the way physicians and caregivers work in Ambulatory or Outpatient Practices, consisting of:

BENEFITS

IMPROVED PRODUCTIVITY

Streamline workflow to be notified and be informed of daily schedules, overdue tasks, electronic messages, and documents pending for further processing. Utilize hundreds of Clinical Templates to capture patient encounter in less than 5 minutes and 8 clicks! Patients provide their own medical history over the Web before visiting your office or while waiting for their turn in the office, thus reducing burden of care givers to capture the same information.

ENHANCED PATIENT CARE

Access patient records anywhere anytime! Let patients access their own record over the Web and be informed about "Continuity of Care document (CCD)" across multiple providers, hospitals, and doctors' offices. Patients can register themselves, request appointments, view investigation results, request prescription refills, and update demographics.

DECREASED OVERHEADS

Instead of you following up a problem, with "intelligent workflow engine", a problem follows you wherever you are! Preventative health reminders, electronic document management, mobile communications, and integration of administrative and clinical applications ensure that what is urgent and important is achieved in less time, by fewer FTE office staff, and with improved patient care!

INCREASED REIMBURSEMENTS

Integrate clinical documentation with CMS guidelines for billing, and generate E/M codes based on what is documented. Capture charges at the point-of-care, eliminate ambiguities resulting from incomplete charges and illegible billing cards, prevent write-offs resulting from missing referral and authorizations or exceeding filing limits, and reduce first-time claim rejections.

LEVERAGING EXISTING TECHNOLOGY

Protect your investment in hardware and networking, PDA and thin clients, or connect all of them to Internet. Whatever is feasible and desired by doctor's offices, iPatientCare can be configured and personalized on the fly!

ADHERANCE TO "BEST PRACTICES"

Use iPatientCare EMR to utilize its Knowledge Base consisting of clinical best practices, guidelines, algorithms, and preventative health reminders to arrive at desired outcome at lowest possible cost! Decision support at the point of care results in informed and prompt decision-making.

HIPAA MANDATED SECURITY & PRIVACY

No good system can ignore HIPAA mandates on security and privacy. Configure your practice management and EMR systems for strong user passwords, two factor authentication, password aging, and the complete audit trail. Capture necessary consent forms electronically for protecting privacy of patient records.

Without a care coordinator, you have only people, processes and technology to help our
